WEATHER ADVISORY - MONSOON

ONSET OF MONSOON RAINS LIKELY DURING THE FIRST WEEK OF JULY, 2026

Met office has informed that a westerly wave is likely to enter upper parts of the country from 30th June (evening/night). Meanwhile, moist currents from the Arabian Sea are continuously penetrating the eastern and central parts of the country. Moist currents from the Bay of Bengal are expected to reach the upper parts from 2nd July. Under the influence of this weather system:

- **Scattered rain windstorm/thundershower (with isolated heavyfalls)** is expected in Rawalpindi, Murree, Galliat, Attock, Chakwal, Jhelum, Mandi Bahauddin, Gujrat, Gujranwala, Hafizabad, Wazirabad, Faisalabad, Khushab, Sargodha, Lahore, Sheikhupura, Sialkot, Narowal from **1st to 6th July**, while in Sahiwal, Jhang, Toba Tek Singh, Pakpattan, Nankana Sahib, Chiniot, Okara, Kasur, Noor Pur Thal, Bhakkar, Layyah Mianwali, Bahawalpur, Bahawalnagar, D.G. Khan, Multan, Khanewal, Lodhran, Muzaffargarh and Rajanpur from **3rd to 6th July** with occasional gaps.

IMPACTS & PREVENTIVE MEASURES

- Windstorm & lightning may damage weak structures (solar panels, electric poles, bill boards etc.) during the forecast period.
- Possibility of flash-flooding in the hill torrents of DG Khan from 2nd to 6th July.
- Heavy rains may cause Urban/flash flooding in Rawalpindi, Sialkot, Narowal, Gujranwala, Lahore and Faisalabad from 1st to 4th July.
- Tourists and travelers are advised to remain extra cautious and avoid unnecessary travelling during the forecast period.
- Farmers are advised to manage their crop activities keeping in view the weather conditions and take care of their livestock as well.
- Prevailing hot and humid conditions are likely to subside during the forecast period.

MONTHLY RAINFALL OUTLOOK - JUNE

According to Met Department;

- Near-normal to slightly below-normal rainfall is largely anticipated across the country during June 2026, with the most pronounced negative anomalies expected over northeastern Punjab.
- In contrast, Normal rainfall is likely over the southern regions of Punjab
- Overall, rainfall is expected to exhibit considerable spatial variability.

POSSIBLE IMPACTS

- **Below-normal rainfall** is likely to **reduce water availability**, increasing reliance on stored water and groundwater for agriculture.
- The **reduced rainfall** may fail to fulfill irrigation needs for seasonal vegetables and growing Kharif crops in Punjab, **requiring supplemental irrigation**.
- **Above-normal temperatures** may cause **heat stress** on newly sown and early-stage Kharif crops; timely irrigation management is advised to minimize potential losses.
- **Elevated temperatures** over northern areas of country are likely to **accelerate snowmelt**, while slightly above-normal rainfall may further exacerbate the situation, increasing the **risk of flash floods** and landslides in mountainous and flood-prone areas.
- **Despite below-normal rainfall**, isolated heavy downpours may still trigger localized **urban flooding** in major cities, particularly in poorly drained and low-lying areas.
- **Spatial temperature gradient** may cause strong winds, dust storms, and hailstorms which may affect seasonal crops, vegetables, and orchards; farmers are advised to take precautionary measures to protect standing crops.
