RAVI	Thein Dam	1732.00	1687.14	58%

MCL* = Maximum Conservation Level

As per 0600 Hrs FFD Report:

- All the Rivers are flowing within normal limits.

MONTHLY OUTLOOK - SEPTEMBER

According to Met Department;

- **Below-normal rainfall** is expected over most parts of the country during September 2026.
- **The highest negative anomalies** are expected over central to southern Pakistan,.
- In contrast, **near-normal to slightly above-normal rainfall** is anticipated over the northern parts of the country.
- **Above-normal temperatures** across most parts of the country during September 2026.
- **The highest probabilities** are likely to prevail over central Punjab.

POSSIBLE IMPACTS

- **Dry conditions** are much **supportive for harvesting** particularly for cotton and peanut.
 - The reduced rainfall **may fail to fulfill irrigation needs** for seasonal vegetables and growing Kharif crops, particularly in Punjab, requiring supplemental irrigation.
 - Despite below-normal rainfall, **isolated heavy downpours** during the start of the season may still **trigger flash flooding** in **mountainous areas of Punjab**, urban flooding in big metropolitan areas and hill torrents in southern Punjab.
 - **Above normal temperature** along with rainfall spell may enhance probability **flash floods, and landslides** in mountainous and other vulnerable areas particularly during first half of the month
 - **Spatial temperature gradient** may cause strong winds, dust storms, and thunderstorm and hailstorms which may affect seasonal crops, vegetables, and orchards; farmers are advised to take **precautionary measures to protect standing crops**.
 - **Dengue outbreaks** are possible in **flood-affected and poorly drained areas**, particularly in urban and low lying regions of the country
- **Advisory for general public:**
- Farmers are advised to visit PDMA & PMD advisories on website before irrigation or harvesting.
 - Travelers and tourists are advised to remain cautious while travelling during rainfall events.
