WEATHER ADVISORY

DUST/WIND & RAIN-THUNDERSTORM PREDICTED IN PROVINCE FROM 16TH TO 20TH JUNE

Met office has informed that a westerly wave is likely to approach upper parts of the country from 16th June and likely to persist till 20th June. Under the influence of this system:

- **Scattered dust/windstorm & rain-thunderstorm (with isolated heavyfalls/hailstorm)** is expected in Rawalpindi, Murree, Galliat, Attock, Chakwal, Jhelum, Mandi Bahauddin, Gujrat, Gujranwala, Hafizabad, Wazirabad, Lahore, Sheikhupura, Sialkot, Narowal, Sahiwal, Jhang, Toba Tek Singh, Pakpattan, Nankana Sahib, Chiniot, Faisalabad, Okara, Kasur, Khushab, Sargodha, Noorpuhal, Bhakkar, Layyah Mianwali, Bahawalpur, Bahawalnagar, D.G. Khan, Multan, Khanewal, Lodhran, Muzaffargarh, Rajanpur, Rahimyar Khan and Kot Addu from 16th to 20th June with occasional gaps.

IMPACTS & PREVENTIVE MEASURES

- **Strong windstorm/hailstorm and lightning** may damage weak structures (electric poles, bill boards, solar panels etc.) during the forecast period.
- Heavy rains may cause **Urban flooding** in Rawalpindi, Gujranwala, Sialkot, Lahore and Faisalabad.
- Farmers are advised to **manage their activities** in accordance with the dust storm and rain prediction.
- Tourists and travelers are advised to **remain cautious and avoid unnecessary travelling** during the forecast period

MONTHLY RAINFALL OUTLOOK - JUNE

According to Met Department;

- Near-normal to slightly below-normal rainfall is largely anticipated across the country during June 2026, with the most pronounced negative anomalies expected over northeastern Punjab.
- In contrast, Normal rainfall is likely over the southern regions of Punjab
- Overall, rainfall is expected to exhibit considerable spatial variability.

POSSIBLE IMPACTS

- **Below-normal rainfall** is likely to **reduce water availability**, increasing reliance on stored water and groundwater for agriculture.
- The **reduced rainfall** may fail to fulfill irrigation needs for seasonal vegetables and growing Kharif crops in Punjab, **requiring supplemental irrigation**.
- **Above-normal temperatures** may cause **heat stress** on newly sown and early-stage Kharif crops; timely irrigation management is advised to minimize potential losses.
- **Elevated temperatures** over northern areas of country are likely to **accelerate snowmelt**, while slightly above-normal rainfall may further exacerbate the situation, increasing the **risk of flash floods** and landslides in mountainous and flood-prone areas.
- **Despite below-normal rainfall**, isolated heavy downpours may still trigger localized **urban flooding** in major cities, particularly in poorly drained and low-lying areas.
- **Spatial temperature gradient** may cause strong winds, dust storms, and hailstorms which may affect seasonal crops, vegetables, and orchards; farmers are advised to take precautionary measures to protect standing crops.
