- Faisalabad = 30°C
- Chakwal = 29°C
- Attock = 28°C
- Rawalpindi = 27°C
- Murree = 19°C

WEATHER FORECAST (24 HOURS)

Tuesday

- Dry weather is expected in most districts of the province, while cold in **Murree, Galliyat** and surroundings during night.

MONTHLY RAINFALL OUTLOOK - OCTOBER

According to Met Department;

- Near-normal to above-normal rainfall over the northern parts of the country, particularly northern Punjab is expected during October 2026
- Near normal to slightly below normal rainfall is anticipated across central to southern parts of the country.
- Overall, the outlook indicates a clear north-south gradient in rainfall anomalies with chances of isolated rainfall events mostly over the northern half of the country during October 2026.
- The highest probabilities for above normal temperatures are likely to prevail over southern Punjab

POSSIBLE IMPACTS

- Dry weather conditions in southern regions are favorable for the post-harvest activities of Kharif crops, particularly rice, cotton, maize and groundnut.
- Above-normal temperatures in upper glaciated regions may contribute to higher than normal flows at vulnerable locations, although the overall probability remains low.
- Spatial temperature gradient may cause strong winds, dust storms, thunderstorm and hailstorms which may affect seasonal crops, vegetables, and orchards; farmers are advised to take precautionary measures to protect standing crops.
- Isolated showers, hailstorms and strong winds may occasionally disrupt Kharif post-harvesting and early Rabi sowing activities.
- Warm and humid environment would support the breeding of Dengue larva in northwestern parts of Punjab.
- Dengue outbreak due to stagnant water is likely in inundated areas.
- Dry conditions, coupled with above-normal temperatures, may contribute to deteriorating air quality and smog formation over the central and southern plains and urban centers of the country, potentially posing health risks to sensitive groups, particularly children and the elderly.

Advisory for general public:

- Farmers are advised to visit PDMA & PMD advisories on website before irrigation or harvesting.
- Travelers and tourists are advised to remain cautious while travelling during rainfall events.
