Meteorological Features (influencing the weather in next 24 Hours)

Yesterday's trough of a strong westerly wave now lies over Kashmir and adjoining areas. The monsoon low that was over southeast Sindh has moved west-southwestward and is now south of Gwadar in the Arabian Sea, becoming insignificant for the upper catchment of major rivers. A low-pressure area has developed over northwest Uttar Pradesh, which may affect the upper catchments of the Sutlej, Ravi, Chenab, and Jhelum rivers after 48 hours. An upper air circulation has developed over West Bengal and adjoining areas. Light to moderate moist currents are penetrating most parts of the country from the Arabian Sea and Bay of Bengal up to 5000 feet. Additionally, a well-marked seasonal low lies over northwest Balochistan, with central pressure below 994 hPa.
