**Meteorological Features (influencing the weather in next 24 Hours)**

Yesterday's trough of a strong westerly wave over northern Afghanistan has now moved to northeast Afghanistan and adjoining Pakistan. The low-pressure area over northeast Sindh and nearby regions persists and extends up to 500 hPa. Meanwhile, the low-pressure area over West Bengal has intensified into a depression and is currently centered over northwest Jharkhand. Moderate to strong moist currents are penetrating the central and southern parts of the country from the Arabian Sea and the Bay of Bengal up to an altitude of 5000 feet. Additionally, a well-marked seasonal low lies over east Balochistan, with a central pressure below 994 hPa.
