Air quality may likely remain Unhealthy, especially for sensitive groups in some Districts. Limiting outdoor activities is recommended.

DROUGHT MONITOR

WEATHER & DROUGHT SITUATION IN JANUARY 2025

Western and South Western Punjab are experiencing mild drought like conditions due to **moisture stress and less than average rainfall** over the past three months

WEATHER OUTLOOK FOR FEBRUARY 2025

A **Slight tendency for slightly below-normal rainfall** is anticipated in **Northern Punjab** during February 2025.

In contrast, the **southern regions** are likely to experience **rainfall that is expected to be closer to normal**, with a reduced negative anomaly as per the region's climatological patterns

DROUGHT OUTLOOK FOR FEBRUARY 2025

Slightly below normal rainfall is expected which will further decrease the soil moisture in the drought prone areas of Punjab.

Mild drought like conditions have developed in Punjab, which may deepen due to deficient rainfall

ADVICE TO FARMERS

- To achieve a good yield, it is necessary to **control weeds** in the crop, which not only reduces the yield but also other negative impacts. **Apply herbicides** to destroy these weeds. **Do not spray during strong winds** and follow the advice of the agricultural department.
- As the **wheat crop will be entering the booting stage**, the growth of crops will accelerate with the gradual increase in temperature this month. It is **crucial to water the crops thoroughly during this phase**.
- However, **Judicious use of available water stock** is recommended for the lower half of Punjab.
