## STRATEGIC SUMMARY

Disaster Management Plan of District Sialkot has been prepared keeping in view historical occurrences of disasters incidents. Flood has been most frequent incident with few incidents of Tornados & Fire incidents. Incidents of earth quakes have also increased in recent past raising alarm for all stake holders.

In Sialkot flood season normally include period from July to September. First flood contingency plan was prepared in 1975 & it has been revised every year. Sialkot experienced highest flood levels in year 2014 and the same are taken as bench Mark. Flood level in River Chenab in 2014 was 858,464 Cs.

This plan covers measures for pre, during & post phases of disaster, gives snap shot of available resources & mechanism for their efficient & effective utilization under close coordination of all stake holders.

## PREPAREDNESS

### I. Identification of areas likely to be affected

All AC's shall identify the areas that were affected during the last flood as well as that are likely to be affected and send lists about all such areas to District Flood Relief Officer before 30 April.

The following areas, which had been affected during previous floods, are likely to be affected.

#### I. Tehsil Sialkot

##### a) River Chenab

River Chenab enters in District Sialkot at Akhnor and Rivers ManawarTavi and Jammu Tavi contribute their water few kilometers upstream Marala Barrage. The flood water passing through Marala Barrage affects the downstream areas on south eastern side of the river mostly comprising the area of tehsil sambrial. However, at the joining point of Jammu Tavi flood water also affects areas of sikka, Bella, Gangwal, Papeen, and Wadran Bella upstream MaralaBarraege.

Nadala enclave, where River Chenab and Munawar Tawi converge, many villages including Nadala, Machola, Bhak \ lial, HialMinhasan, Simbli Rai, Salepur, Bhatwal, Maheel, JhumianDallalan, Ikramabad, Khoonjpur, Beli and Rasulpur are affected.

##### b) Jammu Tavi:

Villages across the LMB of Chaprar area, the whole of Bajwat area and areas along LMB downstream Saipur Bridge and Saidpur-Bajwat Road on northern side of the bridge etc.

##### C) Nullah Aik

Though the Irrigation Department has constructed three protection bunds namely MallyChak, Hajipura and Nekapura Bunds to save the city. Nullah Aik overflows at many points. This water affects syedanwali, Raipur, Gopal Pur, Rasul Pur, Lalokay in southern side affects the villages DaburjiArayan, Shafi Da Bhatta, Lakhan Pur, ChhawaniSulehrian, KotliHernarayan, Praag Pur, KotMandianwala, Gunna Khurd, Hamza Ghus, Nawann Pin, Alhilal Colony, PakkiKotli and SadraBadra after t he nullah Aik entering into the city overflow at Naka pura and contributes to the flood water overflowing from pindiArayan and affects the above-mentioned villages. It overflows at AraziYaqus and affects the villages AraziYaqus, Daburji Mallyian. It overflows at KotliAameer Ali and affects Miani and Butter.

PDMA requires all districts to setup a control room at the incidence of a disaster. This control room would plan and execute a well-knit Governmental disaster response by bringing together all representatives of the various Governmental departments. This control room would be operational around the clock and PDMA must be informed about its operation and in-charge by filling the following template:

**District:** \_\_\_\_\_

**Focal Person:** \_\_\_\_\_

**Date:** \_\_\_\_\_

S#	Location of control room	Shift I Incharge Name and Contact	Shift II Incharge Name and Contact	Shift III Incharge Name and Contact	Phone Numbers	Fax Numbers	E- Mail Address
----	--------------------------	-----------------------------------	------------------------------------	-------------------------------------	---------------	-------------	-----------------

## ANNEX XII: CAMP MANAGEMENT SOPs

- Camps would be established in areas accessible by metalled roads so that provision of essential facilities is not difficult
- Basic facilities such as food, clean drinking water, health, hygiene and sanitation should be available at these shelters.
- Proper registration mechanism should be in place to differentiate between those actually affected and cunning opportunists
- Proper security system should be in place in coordination with the local police as the presence of police always acts as deterrence for criminals who may be attracted to such places.
- Emergency medical care should be available as well as a proper firefighting system as fire out breaks are common in such tents
- Proper camp management should be announced and notified and there should be a complaint cell as well
- A proper distribution mechanism should be in place to ensure that the needy get what they deserve.
- Scattered camps should be catered for and encouraged to join the main camp.
- At times shallow hand pumps are not safe for drinking as the water underground has been affected. In such cases clean medicated water should be provided through water bowsers.
- Vector control is an essential part of the camp management and steps should be taken to remove rats, snakes and mosquitoes etc.
- Un-accompanied and missing children shall be placed separately with proper care and fulfilment of their physical and psycho-social needs.
- Needs of women as per local and cultural environment shall be considered for establishing separate relief camps for ladies with provision of proper security and light arrangements.

## ANNEX XIV: LIST OF BASIC TERMS

### Acceptable risk

The level of loss a society or community considers it can live with and for which it does not need to invest in mitigation

### Biological hazard

Biological vectors, micro-organisms, toxins and bioactive substances, which may cause the loss of life or injury, property damage, social and economic disruption or environmental degradation.

### Capacity

A combination of all the strengths and resources available within a community, society or organization that can reduce the level of risk, or the effects of a disaster.

Capacity may include physical, institutional, social or economic means as well as skilled personnel or collective attributes such as leadership and management. Capacity may also be described as capability.

### Capacity building

Efforts aimed to develop human skills or societal infrastructure within a community or organization needed to reduce the level of risk. In extended understanding, capacity building also includes development of institutional, financial, political and other resources, at different levels of the society.

### Climate change

The climate of a place or region is changed if over an extended period (typically decades or longer) there is a statistically significant change in measurements of either the mean temperature or variability of the climate for that region.

### Coping capacity

The means by which people or organizations use available resources and abilities to face a disaster. In general, this involves managing resources, both in normal times as well as during crises or adverse conditions.

### Disaster

A serious disruption of the functioning of a community or society causing widespread human, material, economic or environmental losses which exceed the ability of the affected community or society to cope using its own resources. It results from the combination of hazards, conditions of vulnerability and insufficient capacity to reduce the potential negative consequences of risk.

### Disaster risk management (DRM)

The comprehensive approach to reduce the adverse impacts of a disaster. DRM encompasses all actions taken before, during, and after the disasters. It includes activities on mitigation, preparedness, emergency response, recovery, rehabilitation, and reconstruction.

### Disaster risk reduction/disaster reduction

The measures aimed to minimize vulnerabilities and disaster risks throughout a society, to avoid (prevention) or to limit (mitigation and preparedness) the adverse impacts of hazards, within the broad context of sustainable development.

### Early warning

The provision of timely and effective information, through identified institutions, to communities and individuals so that they could take action to reduce their risks and prepare for effective response.

### Emergency management

The management and deployment of resources for dealing with all aspects of emergencies, in particularly preparedness, response and rehabilitation

### Forecast

Estimate of the occurrence of a future event (UNESCO, WMO). This term is used with different meanings in different disciplines.

### Geological hazard

Natural earth processes that may cause the loss of life or injury, property damage, social and economic disruption or environmental degradation. For example earthquakes, tsunamis, volcanic activity and emissions, landslides, rockslides, rock falls or avalanches, surface collapses, expansive soils and debris or mud flows.
