## WEATHER ADVISORY

### DUST/THUNDERSTORM-RAIN PREDICTED IN UPPER PARTS OF THE COUNTRY FROM 2nd TO 5th JUNE, 2026

Met office has informed that westerly wave is likely to approach upper parts of the country on 2nd June and likely to persist till 5th June. Under the influence of this system:

- Scattered dust/thunderstorm-rain (with few heavy falls and hailstorm) is expected in Rawalpindi, Murree, Galliyat, Attock, Chakwal, Jhelum, Mandi Bahauddin, Gujrat, Gujranwala, Hafizabad, Wazirabad, Lahore, Sheikhpura, Sialkot, Narowal, Sahiwal, Jhang, Toba Tek Singh, Nankana Sahib, Chiniot, Faisalabad, Okara, Kasur, Khushab, Sargodha, Bhakkar, Mianwali, Bahawalpur, Bahawalnagar, D.G. Khan, Multan, Khanewal, Lodhran, Muzaffargarh, Rajanpur, Rahimyar Khan and Layyah from 2nd to 5th June with occasional gaps.

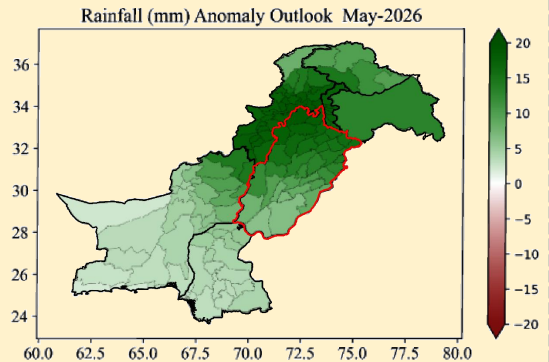

### IMPACTS & PREVENTIVE MEASURES

- Windstorm/ hailstorm and lightning may damage weak structures (solar panels, electric poles, bill boards etc.) during the period.
- Farmers are advised to manage their crops according to the prevailing weather conditions.
- Tourists and travelers are advised to remain extra cautious and avoid unnecessary travelling during the forecast period.

## MONTHLY RAINFALL OUTLOOK - MAY

### According to Met Department;

- A general tendency for above-normal rainfall is anticipated across the country during May 2026, with the most pronounced positive anomalies concentrated over the northern half of the country, particularly adjoining areas of northern Punjab.
- Whereas slightly above-normal rainfall is expected over Southern Punjab during the forecast month.
- Overall, the wet conditions are expected to persist with a clear north-to-south weakening gradient

### POSSIBLE IMPACTS

- Above-normal rainfall in northern areas of Punjab is likely to improve water availability, reducing reliance on stored water for agriculture.
- The increased rainfall may fulfill the irrigation need for seasonal vegetables and newly sown Kharif crops in Punjab.
- Above-normal temperatures may support harvesting of remaining Rabi crops.
- Spatial temperature gradient may cause strong winds, dust storm, and hailstorm which may affect the seasonal crops, vegetables and orchard; therefore, timely harvesting of Rabi crops is advised to minimize potential losses.
- Above-normal temperatures in May could increase the potential for heat spikes and heatwave conditions especially over the plain areas of Punjab; despite the expected above-normal rainfall, these regions may still experience heat-like conditions between rainfall spells.
- The rising temperatures particularly over southern regions, may increase vector-borne disease risk like Dengue.
- Above-normal rainfall may increase the risk of flash floods and landslides, particularly in mountainous and flood-prone areas.
- Additionally, this could also raise the likelihood of localized urban flooding in major cities, especially in poorly drained and low-lying areas.
- Heavy rainfall along with the hailing and windstorm may damage public property (electric poles, bill boards and solar panels etc.)
- Above-normal rainfall is expected to enhance runoff in the upper Indus basin.
