FLOOD HISTORY

District Rajanpur is vulnerable to two types of floods i.e Hill Torrents from western side & Riverine Flood from Eastern side of the district.

Hill Torrents:

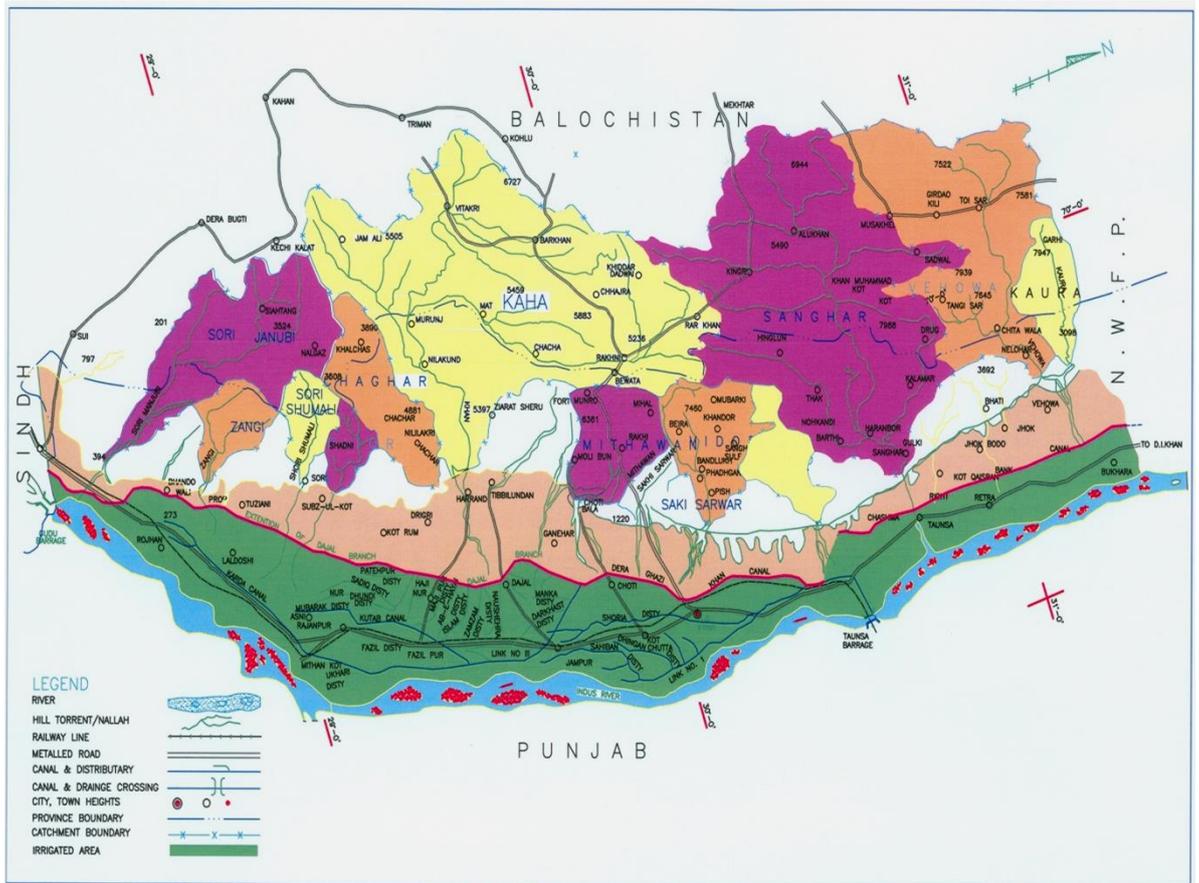

The Hill Torrents originate from catchment area of Suleman Mountains ranges with maximum capacity of one Lac cusecs & enter through various darras i.e **KAHA, CHACHAR, SORI** etc and pose threat to major towns. i.e Dajal, Hajipur, Lalgah in tehsil Jampur & Asni in Tehsil Rajanpur. This rain water enters the settled areas and causes huge damages to crops, land, canal irrigation system and local population.

Riverine Flood:

During Monsoon season, the discharge in Indus River increases and excessive flood water results in inundation. It causes huge loss to the crops, livestock and local population in the adjoining area of River Indus. Major towns exposed to the River Indus are Kotla Mughlan, Bait Sountra, Mehraywala, kotla Androon, Noshehra, Kot Mithan, Umer kot and Rojhan.

Qadra Canal & Dajal Branch are affected by both types of floods.
