**FUNCTION**

Lala creek is acting as a creek cum feeding channel for Kot Addu Canal Division and irrigating vast area of a whole section of Kot Addu Canal Division.

**HEAD REGULATOR**

Constructed by Kot Addu division at a distance of 70 km on Lala creek (Dhol wala) and two channels are off taking from this head regulator.

**BENEFICIARY**

- Kot Addu Canal Division is the beneficiary of this creek and its maintaining from Lala Head Regulator to Dhole wala Head Regulator is the responsibility of Layyah Canal Division.

**2.2 LOCATION MAP**

Index map with showing location of flood Bund in Layyah Canal Division Layyah is attached as page No. 07

## BRIEF HISTORY OF PAST FLOOD EVENTS

Layyah City is located on the left bank of River Indus and River Creek namely Lala Creek, runs parallel to the Layyah City. Layyah City Flood Protection Bund is the only defense line to protect Layyah city against the flood water of Lala creek. During flood 2010, Lala Creek became over and above its capacity and the area adjacent to the city was inundated. Due to hectic efforts of the staff of Irrigation Department, District Government Layyah, Pakistan Army and other Provincial Departments, Layyah city was saved. During these efforts, a local Bund was constructed along the Lala Creek with the co-operation of District Government and Irrigation Department. Later on Government of the Punjab approved a scheme “**Extension and Strengthening of Layyah City Flood Protection Bund RD: 0+000 to 24+600**”, funded from Southern Punjab Development Programme. This scheme was completed at site during June, 2012 and now Layyah City is in safe position.

During month of July – August 2017, medium flood passed in River Indus at Taunsa Barrage and following structures came under attack and by conducting extensive flood fighting activity under para 2.89 of P.W.D code saved the structures;

1. Link Bund
2. Bakhri Ahmad Khan Protection Bund

During month of July – August 2019, 2020 and 2021, medium flood passed in River Indus at Taunsa Barrage and following structures came under attack and by conducting extensive flood fighting activity under para 2.89 of P.W.D code saved the structures;

1. Sloping Spur at RD 37+500 Shahwala Groyne
2. J-Head Spur RD 47+500 Shahwala Groyne

3. During month of July, August & September 2022 High Flood passed in River Indus and following structures came under attack and by conducting extensive flood fighting activity under clause 59 D-iii saved the structures;

1. Earthen Stud at RD 60+000 Shahwala Groyne
2. Bakhri Ahmad Khan Flood Bund Between RD: 9+500 to 10+100
3. Inverted hockey Spur at RD 66+000 of Shahwala Groyne

During month of July, August & September 2023 Medium Flood passed in River Indus and following structures came under attack and by conducting extensive flood fighting activity under clause 59 D-iii saved the structures;

1. Solid Stud No. 4 at RD 5+500 of Bakhri Ahmad Khan Protection Bund
2. 3 Nos. Studs between RD: 9+500 to 10+200 of Bakhri Ahmad Khan Protection Bund

**BRIEF ISSUES FACED DURING FLOOD SEASON 2023 ARE AS UNDER:**

- I. A Head-Regulator has recently been constructed at Lala Creek opposite RD 9 +000 of Layyah City flood bund. Maximum capacity of the Head-Regulator is only 10000 Cs whereas about 14000 cs discharge has passed in the creek. Due to heading up of water adjoining lands were inundated on upstream side of Head Regulator. Layyah city was likely to be affected which was saved by constructing emergent dykes. Moreover, politically influential figures of the area were insisting on reducing the flow through the Head- Regulator in order to save people in downstream reach while in case of further heading upstream area was likely to be in inundated upto such hights that even flood water could have by passed Layyah City Flood Bund from RD: 0+000. In order to avert such complications in future, it is recommended that the Layyah City flood Bund beyond RD 0+000 may be extended enough to ensure the safety of Layyah city.
- II. Pertinently mentioned that some sewer pipes have been embedded in the Layyah city flood bund which has already been reported to concerned Department. Furthermore, dwellings on river side of the bund should be discouraged which cause serious problems during floods.
- III. Construction of river interventions by the Bhakkar Canal Division during the year 2018-19, tendency of River flow has totally diverted towards the left edge of River Indus from D/S Concavo Convex Guide Wall (PKG-E) upto Basti Rakhwan, due to change in the morphology & behavior of the River flow. Loop is developing in this reach; Basti Wara Seheran, Basti Tootan and Rakhwan have come under threat. River has engulfed valuable agricultural land in vicinity of Mouza Warah Seheran. The model  
Study of reach 2<sup>nd</sup> "Extension of Bhakkar Flood Bund for infrastructure of Abadies and infrastructures in District Bhakkar And Layyah (RD:180+000 to 300+000) Upstream of under construction of Layyah Taunsa Bridge has been completed during the month of December, 2022 and process of PC-I is in under progress.

### **FLOOD FIGHTING STRATEGY**

The Sub Divisional Officer, Flood Bund Sub Division Shahwala Groyne will work as Flood Emergency Officer. The flood emergency center will run under his supervision with the following officials / staff.

- a) Signaler Layyah.
- b) Telephone Attendant.
- c) Peon = 3 Nos.

During flood days, leave will be granted to above officials only by Executive Engineer, Layyah Irrigation Division, Layyah.

Flood emergency centre will be opened in the Canal Telegraphy office Layyah under the supervision of Sub Divisional Officer, Flood Bund Sub Division Shahwala Groyne at canal colony Layyah having Telephone No.0606/412435, which will remain open for 24 Hours from 15.06.2022 to 15.10.2022 on all working days including Sunday and all other public holidays. All precautionary measures will be adopted to cope with any eventuality during flood 2023, Flood fighting strategy would be adopted for the safe passage of flow.

#### **STAGE – I (DISCHARGE 2, 50,000 – 3, 75,000 CS) (LOW FLOOD)**

In low flood, the temporary watching huts will be established and flood fighting material will be shifted. Watching establishment employed for this purpose will remain busy under the supervision of concerned Sub Engineer.

#### **STAGE – II (DISCHARGE 3, 75,000 – 5, 00,000 CS) (MEDIUM FLOOD)**

When river water enters in to medium stage, it will start spreading on adjoining area touching toe of Bunds. Then it becomes necessary to be vigilant, watching of Bunds and deploying of machinery will be started to avoid any leakage from bunds. Sub Engineers will

shift their camps to site as per duty rosters. The Telegraph office of Layyah Canal Division will act as Flood Information Center and flood situation will be conveyed to Civil Administration and flood warning centers. Sub Divisional Officer, Flood Bund Sub Division Shahwala Groyne will keep the Executive Engineer apprised about latest development regarding flood situation.

### **STAGE – III (DISCHARGE 5, 00,000 – 6, 50,000 CS)(HIGH FLOOD)**

When river water enters in high flood range the Sub Divisional Officers Bhagal, Hayat and Inayat shall also shift their camps at vulnerable sites as planned in the duty roaster. Executive Engineer will keep liaison with Civil Administration, Army & Public representatives.

### **STAGE–IV (DISCHARGE ABOVE 7, 50,000 CS) ( EXCEPTIONALLY)**

When river water enters in exceptionally high flood, a gauge and discharge register will be maintained in the flood emergency centers. Morning and evening gauges will be sent to the officers of District Administration as well as other allied Departments.

As soon as the free board is left as 3.0 ft, the District Coordination Officer Layyah, Superintendent of Police Layyah and Administrator Municipal Committee Layyah will be requested to arrange for additional labour for watching of bunds.

On receipts of a signal of very high flood at Chashma Barrage, the Assistant Engineer Agriculture Layyah will be requested to keep 02 No. Bulldozers stand by, so that the same may be used during emergency.

The Sub Divisional Officers will keep mobile phones in working order so that the flood messages are expeditiously conveyed to all concerned. Punjab Flood Commission will provide one station wireless set for installing on the Bund so as to communicate the gauges and other emergency messages to Irrigation, Civil and any other officers. Requisition in this behalf has since been made with Secretary Punjab Flood Commission. District Co-ordination Officer/Superintendent of Police Layyah will convey instructions relating to protection of Layyah City and all nearby flood prone areas through Police Wireless set.

The terminology of different kinds of flood in low, Medium, High, very high and exceptionally high and they will be taken as such in the light of any wireless message received from respective warning centers. Since there is no regular establishment on Flood Protection Bunds and Spurs, so a gang of one man per mile will be employed on Flood Protection Bunds and two men per Spur will be employed during Flood season 2023 i.e 15<sup>th</sup> June to 15<sup>th</sup> October. The establishment will take care of all preparations like filling depressions, rain

cuts/gharas, clearance of slopes upto 10 feet beyond toe of Flood Bund, opening / puddling holes etc.

## 7.2 WATCHING ESTABLISHMENT

Watching depends upon presence of the watching establishment on each embankment and training work. It has been experienced that it is impossible to adjust number of watching personnel instantaneously in conformity with the flood stages. During high flood, the local population is busy to safeguard themselves along with their families and is not available for employment. It is now decided that by 15th of May, watching establishment, commensurate with the high flood situation, will be employed for 5 months, after advertising in the press, by a committee headed by the Executive Engineer, Layyah Canal Division and comprising Sub Divisional Officer. The watching establishment will be paid through regular payrolls, not through muster rolls. This establishment will primarily perform the following functions:

Earthwork on all training works including gharas filling, strengthening of local weak sites, repairing ramps etc. will be carried out by this establishment.

As the establishment would have already checked and repaired the training works all along, it will be in a much better position to keep under watch the critical reaches throughout the

flood season. For reaches other than vulnerable reaches, the watching establishment shall be employed as under to maintain and up keep the banks to become motorable.

- a). During normal flood stage, one man per mile / shift for two shifts in a day.
- b). During low flood stage, the scale of establishment is three men / mile / shift for two shifts in a day.
- c). In medium flood, the scale will be four men / mile / shift for three shifts in a day.
- d). During high floods, four men / mile / shift for three shifts per day will be employed.
- e). During very high flood stage of 6.5 lac Cs; discharge, the six men / mile / shift in three shift will be employed.

After every three miles there will be a Mate and for every five miles there will be a Mistary in addition to Mate to supervise the work of Beldars.

The statement showing establishment watching of Establishment is attached at page No. 18.

### 7.3 ARRANGEMENT AT SENSITIVE SITES.

The Incharge Sub Divisional Officer and Sub Engineer will maintain their camp at site along with their establishment round the clock and will also keep up liaison with the Civil and the Army authorities.

In all vulnerable reaches / sites additional emergency gangs each with 5 men will be employed when the river rises above medium flood stage and will be maintained till end of the season. In case of very high and exceptionally high flood, this scale may be increased by the Executive Engineer in consultation with Director Technical / Chief Engineer.

In case, where additional labour is required at high discharge, it will be arranged through the civil authorities.
